

# LETTUCE ICE CALOR

## A HIGH-YIELDING SUMMER LETTUCE WITH FUSARIUM RESISTANCE

- Uniform head shape
- Resistance to Fusarium race 1
- Suitable for open field and hydroponic production

### Type

ICE CALOR is a summer crisphead type lettuce for fresh, processing and pre-packed markets

### Maturity

40-45 days (summer)

### Plant Characteristics

Large frame with very good heat tolerance.

### Features & Benefits

ICE CALOR shows very good adaptability for summer with very good heat tolerance and Fusarium resistance

**Disclaimer:** This information is based on our observations and/or information from other sources. As crop performance depends on the interaction between the genetic potential of the seed, its physiological characteristics, and the environment, including management, we give no warranty express or implied, for the performance of crops relative to the information given nor do we accept any liability for any loss, direct or consequential, that may arise from whatsoever cause. Please read the Starke Ayres Standard Terms and Conditions of Sale before ordering seed.

**Resistance:** is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest or pathogen pressure (HR = High resistance, IR = Intermediate resistance).
