

GREEN PEA KELVEDON WONDER

HIGH YIELDING EARLY MATURING PEA

- Fresh Market, retail and processing
- Ideal for successional sowings
- Mildew resistance

Type

Pisum sativum, Green pea.

Maturity

Early maturing 70 to 80 days to first harvest, depending on weather conditions.

Plant Characteristics

Medium compact bush type. With an average plant height of 45cm – 50cm.

Variety Characteristics

Excellent high-quality medium-sized pods with 6-8 peas per pod. Uniform peas for local fresh market, retail markets and processing. High yielding, sweet and tender, great for fresh eating or freezing.

Disease Resistance

IR: Downy mildew (Pcu)

Features & Benefits

Typically planted in early spring for a summer harvest, but also suitable for successive sowing. The planting slot depends on the frost occurrence in the later planting. Full sun (open field) and partial shade (undercover netting).

In row spacing: 5cm (2 inches)

Space between rows: 45cm (18 inches)

Disclaimer: This information is based on our observations and/or information from other sources. As crop performance depends on the interaction between the genetic potential of the seed, its physiological characteristics, and the environment, including management, we give no warranty express or implied, for the performance of crops relative to the information given nor do we accept any liability for any loss, direct or consequential, that may arise from whatsoever cause. Please read the Starke Ayres Standard Terms and Conditions of Sale before ordering seed.

Resistance: is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest or pathogen pressure (HR = High resistance, IR = Intermediate resistance).
