

TOMATO RILEY

RILEY is an exciting new indeterminate, egg-shaped saladette, specially bred for the market with all the strong futures needed for the tough conditions.

- Well adapted variety
- Balanced plant
- Big fruit size
- Fol:3, TMV, TYLCV and TSWV resistance

Type

Indeterminate saladette.

Maturity

It's a good early-medium maturing variety. The first fruit will mature around 80-85 days after transplanting. Days to maturity may vary due to environmental conditions that may delay maturity.

Plant Characteristics

RILEY has a strong stand and plant framework, making the variety balanced and well adapted to warmer weather conditions.

Plant Populations

Depending on spacing the variety can be planted between 13 500 - 15 000 plants per hectare. It is an open field variety requiring normal trellising. Not pruning will help reduce fruit size.

Variety Characteristics

RILEY is a firm, large, attractive, egg-shaped fruit with an average mass of 140-170g. It is well balanced and maintains its fruit shape and size. RILEY does reduce its fruit size when no pruning practices are carried out.

Features & Benefits

RILEY has an excellent disease resistance package, with good fruit size in comparison to STAR 9081.

Disease Resistance

HR: Va:1, Vd:1, Fol:1-3, TMV, TYLCV, IR: Ma, Mi, Mj, Lt, TSWV

Disclaimer: This information is based on our observations and/or information from other sources. As crop performance depends on the interaction between the genetic potential of the seed, its physiological characteristics, and the environment, including management, we give no warranty express or implied, for the performance of crops relative to the information given nor do we accept any liability for any loss, direct or consequential, that may arise from whatsoever cause. Please read the Starke Ayres Standard Terms and Conditions of Sale before ordering seed.

Resistance: is the ability of a plant variety to restrict the growth and development of a specified pest or pathogen and/or the damage they cause when compared to susceptible plant varieties under similar environmental conditions and pest or pathogen pressure. Resistant varieties may exhibit some disease symptoms or damage under heavy pest or pathogen pressure (HR = High resistance, IR = Intermediate resistance).
